1. We discussed Unit testing.
2. Maya showed me how to switch between a fake repository to a Mockito mock repository for propper isolated unit testing.
3. I am now going to follow her directions and convert all my fake repo unit tests to Mockito unit tests. Then i will focus on completing all of my user-story functionalities.

Write a summary of what you discussed with your teacher...

1. Showed my progress with the design and implementation of my application.
2. I am behind schedule and need to pick up the pace before the final deadline.
3. I will finish unit testing and the design document as well as the security report by the end of this sprint.

Checkpoint 4   Maja   18-05-2021   😊 😊

- We discussed my progress with the personal project application. I made some changes to the planned functionality (removed patient interaction with the application and instead added dentist assistants as the other type of user).
- It would be a good idea to send the email notifications to the patients a day before the actual appointment instead of on the day itself.
- My next priority is adding propper authorization to the application. And to refactor the back-end according to the the SOLID principles.

We discussed my progress with the personal project application. Initial CRUD with Database connection
I am going to set SonatCube up and work on improving my documentation for the rest of the sprint.

Checkpoint 2   **Tim**   12-03-2021   🙂 🙂

Nedelchev, Tsanko T.N.   3 months ago

1. We mostly discussed the gitlab CI/CD pipeline as I requested some help with it. I presented my application's ERD.

2. It would be a good idea to have one more type of user for Dental Assistants in the ERD.

3. I am now going to do some research into front end frameworks and finish with the design document.

Checkpoint 1   **Tim**   26-02-2021   🙂 🙂

1. What did you discuss with the teacher?
2. What was the feedback?
3. What are you going to do now?

Nedelchev, Tsanko T.N.   4 months ago
1. We discussed the project's documentation.
2. I don't need both User stories and functional requirements. I should add prioritization and time estimation to the user stories. I should only create documentation that is needed to support my explanations when requesting feedback.
3. I will remove the functional requirements and remake them into user stories with proper prioritization and time estimations. I will also start with my API setup.
